

OEKOWI[®]

To bring the economy, society and ecology into harmony so that they support and do not endanger one another: that's the challenge of the 21st century.

OEKOWI[®] is a teaching concept that takes up this challenge. Based on a computer-supported simulation, the network of connections between economics and commerce, between state and company management, between business, society and nature are revealed. This many-layered simulation model is based on a realistic scenario.

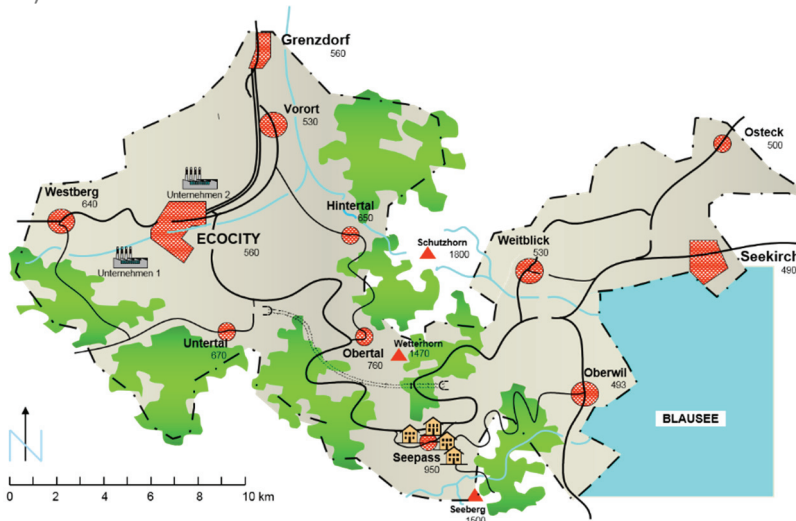

YOUR BENEFIT

ECOMAN enables the participants to:

- understand the economically and legally relevant effects of ecological and social behaviour.
- improve, by intensive co-operation between the different groups, the overall situation in the model state of "Ecoland", with regard to prosperity and welfare.
- consciously address conflicting aims of state and company management and search for solutions within and also between the acting groups.
- work together in groups or as a team in a targeted and solution-oriented manner

MODEL

The participants assume various functions (households, government, business). Depending on the complexity further commissions (e.g. political parties) can be simulated:
